

# Press Release

## **The Consultant's Partner** New! Version 2

We are proud to announce the release of The Consultant's Partner (TCP) Version 2.0. The Consultant's Partner provides consultants and like professionals with a comprehensive, yet simple approach to business management.

The software provides a centralized location for the daily administration of the services your office renders, the time consumed in doing these tasks, and the preparation and maintenance of billing and receivables. One may email invoices, statements, and letters as well. In addition, TCP supplies its users with the ability to track notes, letters, appointments, messages, mileage and related expenses, as well as print labels and rotary cards.

Back up and restore functions are built into the software, as are import and export capabilities. With its single menu interface, data is readily available at your fingertips without the need of maintaining your data in multiple programs.

TCP runs in Windows 95/98/ME/NT4/2000/XP.

Single User Price: \$295
